

Site Name: LEWIN METALS DIV CERRO DE PASCO CORP

Alias(es): CERRO FLOW PRODUCTS

City: SAUGET

County or Parish: ST. CLAIR

State: IL

Refer to Report Dated: 07/03/2013

EPA ID: ILP000510791

Report Developed By: STATE

State ID:

Report Type: PRELIMINARY ASSESSMENT #001

Decision Date: 07/03/2013

- ☒ 1. Further Remedial Site Assessment Under CERCLA (Superfund) is not required because: NFRAP-Site does not qualify for the NPL based on existing information
- ☐ 2. Further Assessment Needed Under CERCLA.
- ☐ 3. Remedial study/cleanup needed.

Decision/Rationale:

The U.S. Environmental Protection Agency (EPA) has determined that no further remedial action by the Federal Superfund program is warranted at the referenced site, at this time. The basis for the no further remedial action planned (NFRAP) determination is provided in the attached document. A NFRAP designation means that no additional remedial steps under the Federal Superfund program will be taken at the site unless new information warranting further Superfund consideration or conditions not previously known to EPA regarding the site are disclosed. In accordance with EPA's decision regarding the tracking of NFRAP sites, the referenced site may be removed from the CERCLIS database and placed in a separate archival database as a historical record if no further Superfund interest is warranted. Archived sites may be returned to the CERCLIS site inventory if new information necessitating further Superfund consideration is discovered.

The Lewin Metals Corporation began industrial activities at the subject property location in 1927 and has evolved into the current owner/operator Cerro Flow Products Inc (Cerro). The subject property contains two areas that are/were addressed by an active Superfund Site known as Sauget Area 1. Soil and groundwater contamination related to these two areas and nearby industrial activities are being addressed by the Sauget Area 1 and Sauget Area 2 Superfund Sites.

Shallow soil samples near the perimeter of the subject property were analyzed using an X-Ray Fluorescence instrument as part of this PA. Three migration pathways and one exposure pathway were evaluated during this PA to identify potential targets which may be, or have been, exposed to hazardous substances stored or released at the subject property. Since threats to exposure pathways associated with contamination identified on the subject property and neighboring properties are or have been addressed by State and Federal regulatory agencies, and the HRS score is below 28.5, it is recommended that the former Lewin Metals site be given a No Further Remedial Action Planned (NFRAP) status at this time. Based on the historic industrial use of the property since 1927, the potential exists for hazardous compounds to be present on the subject property. Should exposure scenarios change in the future through plant closure, property redevelopment, or identification of additional areas of contamination, a reevaluation of the subject property may be warranted.

Decision/Rationale (Continued):
